SUMMARY

Data Science engineering graduate (B.Tech, 2026) with hands-on experience in SQL, Python, Power BI, and Excel, delivering end-to-end analytics projects across retail and transportation domains. Analyzed 1M+ rows of real-world data to identify vendor concentration, inventory inefficiencies, cancellation drivers, profitability trends, and operational performance. Skilled in data cleaning, SQL-based ETL, exploratory and statistical analysis, KPI development, data modeling, and interactive dashboard development. Proven ability to transform large, messy datasets into actionable business insights and data-driven recommendations. Seeking an entry-level Data Analyst role to solve business problems through data.

SKILLS

Languages & Database: Python (Pandas, NumPy, Matplotlib), SQL

Analytics: Data Cleaning, ETL, Exploratory Data Analysis (EDA), KPI Development, Statistical Analysis, Time-Series Analysis, Business Reporting

SQL Techniques: Joins, Aggregations, Subqueries, CTEs, Window Functions

Visualization: Power BI (DAX, Power Query, Data Modeling), Advance Excel (Pivot Tables, VLOOKUP/XLOOKUP, INDEX-MATCH, Power Query)

Tools: Git, GitHub, Jupyter Notebook, PowerPoint

PROJECTS

Vendor Performance Analysis – Retail Inventory & Sales | *SQL, Python, Power BI* | 🌐 GitHub

Objective: Analyzed vendor efficiency and profitability to support strategic purchasing and inventory decisions.

- Developed and optimized a **complex SQL ETL pipeline** to build an aggregated summary table from multiple tables. Improved query performance using CTEs and data filtering, significantly reducing processing time for large datasets.
- Conducted **Exploratory Data Analysis and Hypothesis Testing in Python** to evaluate vendor profitability, pricing strategy effectiveness, and inventory turnover.
- Identified over-dependence on top 10 vendors (**65.7% of purchases**) and uncovered **\$2.71M in unsold inventory** from low-performing vendors, recommending diversification and inventory optimization.
- Built interactive **Power BI dashboards** to visualize vendor performance, profit margins, bulk purchasing impact (**72% cost reduction**), and actionable insights for decision-makers.

OLA Ride Performance Analytics Dashboard | *Excel, SQL, Power BI*

- Analyzed **10,000+ ride records** to quantify booking success rates, cancellation patterns, customer ratings, and revenue performance.
- Built SQL-based ETL workflows to clean and reshape raw operational data into analysis-ready tables, handling nulls, duplicates, and inconsistent category labels.
- Developed an interactive Power BI dashboard tracking booking success, cancellation rate, customer satisfaction, and revenue, with drill-down by time period and ride category.
- Isolated the leading drivers of ride cancellation through trend and segment analysis, and documented the operational changes each finding implied.

CERTIFICATIONS & JOB SIMULATIONS

PwC Switzerland — Power BI Job Simulation

Forage

- Built Power BI dashboards on business datasets; performed cleaning, transformation, and visualization to support executive-level reporting.

Accenture — Data Analytics Virtual Experience

Forage

- Completed client-scenario exercises in data cleaning, visualization, and business insight communication.

EDUCATION

B.Tech, Computer Science Engineering (Data Science)

Techno Main Salt Lake, Kolkata

Graduated: July 2026

CGPA: 7.11/10
